# DISTRIBUTION

# Stay on top of orders, manage the cost of inventory, and support the efficient and effective distribution of goods with Reflex Distribution software.

With Reflex, you can manage a warehouse with advanced functionality for improving business operations, employee productivity, and overall profit.

Promote collaboration, improve processes, and connect all data across your organization with real-time dashboards and built-in analytics and business intelligence.

Quote Management

Order Management

Inventory Control

Warehouse Management

RFID ready and Barcode enabled

Billings

**Manage every aspect of your organization with our distribution-specific modules:**

Web Portals

Analytics, Business Intelligence, and Reporting

## Sales Quote

Create quotes that can be used as general templates or specific templates for a specific customer. Easily create revisions, import orders, generate RFQs for a line or all lines, and define how you will fill the order through the sourcing PATI.

## Sales Order

When entering an order, the user has full access to inventory on hand and what's on order, as well as access to information from the manufacturing floor as to what is being built. Easily perform quick buys or buy ins, source materials, generate travelers, and process returns from a single screen.

“ [With Reflex,] we are able to look at real time data anytime and anywhere and turn it into the information we need to run our company and serve our clients in the most effective manner.”

*Michel Leroux, President,  
Summit Valve and Controls Inc.*
